OBJECTIVE

Being a student of computer science, I believe I have got myself familiarized and capable of learning everything that we need to do with immense technologies around us. I am a freshman and just have completed my internship. I have learned whatever I needed to learn in the university regarding computer science. Now I need to learn industrial things and gain experience to do something bigger and obviously, professional.

I did not have any majors, as our university does not offer any in the undergrad level. But my dissertation was regarding computer networks. I am very much comfortable with Linux. I used several distros of Linux already. Working in your company can help me to learn more and be professionally expert. About me, I am very much eager to learn new things and I love it. I never sleep with my tasks incomplete.

EDUCATION

American International University, Bangladesh

Bachelor of Computer science and Software Engineering (CSSE)

2014(April) – 2018(February)
