Dear CEO,

I am writing in response to your recent advertisement for the position of UX Engineer.

It's been almost 8 months that I'm dealing with all sorts of UI/UX issues. Actually I'm way too much interested in designing things like mobile apps or websites using the newest technologies. We are taught very less in the university about UI/UX. I just made my mind to learn all sorts of UI or designing all by myself. Every day I spend almost 3-4 hours just by researching new technologies for designing and learning new things.

I am kind of in love with modern UI/UX design technologies. I am very eager to establish my career on it. I confess I may have lacking or maybe I am not the best in the market. But yet, my passion for this job is something to be counted pretty seriously. I assure, I will serve my best to uphold your pride and satisfaction of your company.

As a fresher, my salary expectation will not be more than 30,000 BDT per month.

You'll find more about myself in the CV attached.

Sincerely,

Abdullah Al Alif
