Personal Profile

"I attended my Web Technology course in my last semester (five months back). I really did not have much idea about the beauty of working with web technologies like HTML, CSS and JavaScript. We were taught a limited portion of it due to the congested syllabus and time. But later on till today, I have managed myself to get my hands dirty with front-end features at least 4-5 hours a day apart from my other studies. I believe I am gaining expertise with time.

I have learned different mobile-first frameworks of CSS like Bulma, Bootstrap, Semantic UI and Flexbox-Layout all by myself. I also have profound interest in UI/UX designing, Wire-framing and prototyping websites and mobile applications. I have bought several paid courses from Udemy and achieved certificates by practicing all these. I just have fallen in love with it and craving seriously to build my career on front-end development.

I feel sorry to inform you, I may have a little shortcomings in JavaScript as I just tried JQuery instead for a few days. But, I can assure you I will surely adapt myself with JS in no time. Moreover, that value will be added through my internship, I believe. "
